Revision History

Rev. No.	Released Date	Description
Rev.B Beta	Apr. 16, 2009	❖ First Release
Rev.B0	May 05, 2009	❖ Modified "Symbology Reading Control" - "Code 128/EAN-128 Setting" and " GS1 DataBar Setting" ❖ Added "Appendix" - "Symbology ID Table".
Rev.B1	June 22, 2009	❖ Added "Operation Control" - "Presentation Scanning Mode".(Rename to "Presentation Control" on Rev.B4) ❖ Added "Operation Control" —"Time Delay to Low Power Mode".
Rev.B2	Aug. 21, 2009	❖ Added "Symbology Reading Control" - "Composite Code Setting", "PDF/Micro PDF417 Setting", "Codablock F Setting", Korea Post Code Setting". ❖ Added "Operation Control" —"SmartStand Power Off Timeout". ❖ Added "Condensed DataWizard" -"PDF417/Micro PDF417", "Codablock F", "Korea Post Code" ❖ Modified "Appendix" —"Symbology ID Table"
Rev.B3	Oct. 16, 2009	❖ Added "Host Interface Selection" - "IBM PS/2, 25-30 series keyboard wedge interface". ❖ Added "Operation Control" - "Presentation Scanning Auto-sense". ❖ Added "Appendix" —"Symbology ID Table"—"Code 128"
Rev.B4	Mar.05, 2010	❖ Modified "Symbology Reading Control" - "UPC-A & UPC-E Setting" ❖ Renamed "Serial Interface Control" —"Time Out Control" to "Serial Response Time-out". ❖ Renamed "Operation Control" —"Presentation Scanning Mode" to "Presentation Control" ❖ Renamed "Operation Control" —"Auto Power Off Duration" to "Light Source On Time". ❖ Renamed "Operation Control" —" Presentation Scanning Auto-sense" to "Presentation Auto-sense" ❖ Modified "Operation Control" - "Good Read Duration" ❖ Added "Operation Control" - " Presentation Sensitivity" ❖ Added "Appendix" —"Master Default" System Command
Rev. B5	Apr.12, 2010	❖ Modified "Operation Control" - " Hands Free Time-out"
Rev. B6	May 27, 2010	❖ Modified "Serial Interface Control" —"Baud Rate"
Rev. B7	Jun 25 , 2010	❖ Modified "Symbology Reading Control" - "UPC-A & UPC-E Setting" ❖ Modified "Operation Control" - "Time Delay to Low Power Mode"

Revision History

Rev. No.	Released Date	Description
Rev. B8	Sep 29 , 2010	<ul style="list-style-type: none"> ❖ Modified “Symbology Reading Control” - “UPC-A & UPC-E Setting” and “EAN Setting” ❖ Modified “Keyboard Interface Control”–“Keyboard Layout (Language) Setting” ❖ Added “Operation Control” - “Scan Rate Control” and “Good Read Indicator”
Rev. B9	Nov 10 , 2010	<ul style="list-style-type: none"> ❖ Modified “Serial Interface Control”–“Baud Rate”
Rev. C1	Mar 04, 2011	<ul style="list-style-type: none"> ❖ Modified “Serial Interface Control”–“Baud Rate”
Rev. C2	Mar 22, 2011	<ul style="list-style-type: none"> ❖ Modified “Symbology Reading Control” - “Code 39 Setting” ❖ Modified “Serial Interface Control”–“Protocol, ACK/NAK Setting”
Rev. C3	Jul 22, 2011	<ul style="list-style-type: none"> ❖ Renamed “Symbology Reading Control” - “ UCC/EAN-128” to “GS1-128” ❖ Renamed “Serial Interface Control”–“ ACK/NAK Transmission Indication” to “ACK Indication” ❖ Modified “Serial Interface Control”–“ACK Indication” and “Serial response time -out”. ❖ Renamed “Condensed DataWizard” - “ UCC/EAN-128” to “GS1-128”
Rev. C4	Nov 04, 2011	<ul style="list-style-type: none"> ❖ Modified “Symbology Reading Control” - “ Codabar/ NW-7 Setting ”
Rev. C5	Jan 02, 2012	<ul style="list-style-type: none"> ❖ Modified “Wand/Laser Emulation Control”–“ Code 39/Code 128 Emulation”
Rev. C6	Mar 05, 2012	<ul style="list-style-type: none"> ❖ Added “Operation Control” - “1D Barcode Forward-reading Indication”, “1D Barcode Backward-reading Indication”, and “1D Barcode Direction Indication Transmission”.
Rev. C7	Jul 25, 2012	<ul style="list-style-type: none"> ❖ Added “Host Interface Selection”–“ USB HID Legacy” ❖ Modified “Symbology Reading Control” - “Code 128 Setting” ❖ Modified “Wand/Laser Emulation Control”–“ Code 39/Code 128 Emulation” ❖ Modified “Operation Control” - “Operation Mode Setting”, “Presentation Control” ❖ Added “Operation Control” - “ LED illumination Control” and “LED Illumination Delay”
Rev. D1	Dec. 18, 2012	<ul style="list-style-type: none"> ❖ Support 2D Functions.
Rev. D2	Apr. 22. 2013	<ul style="list-style-type: none"> ❖ Modified “Symbology Reading Control” - “ Data Matrix Setting ❖ Modified “Operation Control” - “Batch Reading rule example”
Rev. D3	Aug. 20, 2013	<ul style="list-style-type: none"> ❖ Modified “Symbology Reading Control” - “Readable Bar Code Setting” ❖ Modified “Appendix” - “Symbology ID Table”

Revision History

Rev. No.	Released Date	Description
Rev. D4	Sep. 06, 2013	❖ Modified " Condensed DataWizard " - "1D Bar Code Symbology" and "2D Bar Code Symbology"
Rev. D5	Mar. 06, 2014	❖ Modified " Symbology Reading Control " - "GS1 DataBar Setting" ❖ Added " Appendix "—"USB HID Legacy Mode" Quick Set
Rev. D6	Feb. 06, 2015	❖ Modified " Symbology Reading Control " - "MaxiCode Setting"
Rev. D7	Aug. 17, 2015	❖ Added " Host Interface Selection "—"USB EFT Terminal Mode"
Rev. D8	Dec. 25, 2015	❖ Revised "Revision History" ❖ Added " Getting Started " - A670 series scanner
Rev. D9	May 31, 2016	❖ Added " Operation Control "—"Buzzer Volume"
Rev. D10	Aug. 04, 2016	❖ Added " Symbology ReadingControl " - "Small DM Code Reading"
Rev. D11	Oct. 11, 2016	❖ Modified " Operation Control "—"Buzzer Volume" ❖ Modified " Operation Control "—"Buzzer Tone Adjust"
Rev. D12	Jan. 23, 2017	❖ Modified " Operation Control "—"Buzzer Tone Adjust"
Rev. D13	Mar. 09, 2017	❖ Removed " Operation Control "- "Dollar Sign"; Added " Keyboard Interface Control "- "Dollar Sign Control"
Rev. D14	March. 02, 2018	❖ Added new release model "A780" and "A680". ❖ Modified " Symbology Reading Control " - "Readable Symbology Setting"—"Popular 1D" ❖ Modified " Getting Familiar with Your FuzzyScan " - A780 and A680 series scanner
Rev. D15	Sep. 20, 2018	❖ Added " Operation Control " - "Motion Control" ❖ Modified the description of " Symbology Reading Control "—"UPC/EAN Security Level" ❖ Added information on Code Pages ❖ Modified notes on Unique Barcode Reporting

Revision History

Rev. No.	Released Date	Description
Rev. D16	Nov. 22, 2018	❖ Improved “Symbology Reading Control” – “Code 128 Setting ISBT” - ISBT Concatenation settings
Rev. D17	March. 21, 2019	❖ Modified “ Symbology Reading Control ” – “QR Code Setting” – “Auto detect QR Code Inverse Reading” ❖ Modified “ Operation Control ”–“Motion Control”. Redefined “Motion Control” as “Scene Mode”.
Rev. E1	Nov. 28, 2019	❖ Added “ Serial Port Output ” ❖ Added “Alt-Code Keyboard” option code in “Keyboard Layout” family code
Rev. E2	Mar. 20, 2020	❖ Renamed “ Keyboard Layout Setting ” - “Alt-Code Keyboard” to “Universal” ❖ “ Keyboard Interface Control ” – “Function Key Emulation”: ❖ Renamed option “Enable ASCII 00-31 code as keyboard function code output” to “Enable Keyboard Function Code Table 1 Output” ❖ Renamed option “Ctrl-Output” to “Enable Keyboard Function Code Table 2 Output” ❖ Added option “Enable Keyboard Function Code Table 3 Output” ❖ Modified “ Appendix ” – “Keyboard Function Control Table”: ❖ Renamed column title “Key Function” to “Key Function 1” ❖ Renamed column title “Ctrl-Output” to “Key Function 2” ❖ Added column “Key Function 3”
Rev. E3	May 29, 2020	❖ Modified “ Symbology Reading Control ” – “Small DM Code Reading” to “Damaged DM Code Reading”. ❖ Modified “ Operation Control ” – “Operation Mode” for F & L Series ❖ Added option “Multiple Read Mode”
Rev. E4	Aug. 07, 2020	❖ Added new release model “A560”
Rev. E5	Aug, 14, 2020	❖ “ Symbology Reading Control ” – “QR Code Setting” ❖ Added function option “QR Code Mirror Images”

Rev. E6 Mar. 18, 2021

- ❖ **“Keyboard Interface Control”** – “Keyboard Output”: Added option “Linux Unicode Output”
- ❖ **“Serial Interface Control”** – “Record Suffix”: Added option “User Define”

Cino makes no warranty of any kind with regard to this publication, including, but not limited to, the implied warranty of merchantability and fitness for any particular purpose. Cino shall not be liable for errors contained herein or for incidental consequential damages in connection with the furnishing, performance, or use of this publication. This publication contains proprietary information that is protected by copyright. All rights are reserved. No part of this publication may be photocopied, reproduced or translated into any language, in any forms, in an electronic retrieval system or otherwise, without prior written permission of Cino. All product information and specifications shown in this document may be changed without prior notice.

Warranty

Cino warrants its products against defects in workmanship and materials from the date of shipment, provided that the product is operated under normal and proper conditions. The warranty provisions and durations are furnished by different warranty programs. The above warranty does not apply to any product which has been (i) misused; (ii) damaged by accident or negligence; (iii) modified or altered by the purchaser or other party; (iv) repaired or tampered by unauthorized representatives; (v) operated or stored beyond the specified operational and environmental parameters; (vi) applied software, accessories or parts are not supplied by Cino; (vii) damaged by circumstances out of Cino's control, such as, but not limited to, lightning or fluctuation in electrical power. Any defective product must follow the warranty program and RMA procedures to return Cino for inspection.

GETTING STARTED

Getting Familiar with Your Scanner

Thank you for choosing Cino FuzzyScan Bar Code Scanner. All FuzzyScan scanners deliver world-class performance for a broad range of applications to unleash your productivity.

FuzzyScan family includes **A** series area imager, **F** series linear imager and **L** series laser imager. The **Antimicrobial** models are available for A770, L780 and F780 series scanners which are equipped with Disinfectant-ready Housing and Vibrator. Moreover, the option of **Vibrator** is available for all other series upon request. For more details, please visit our web site or contact your supplier.

This document provides an easy reference for installation and operation purpose. The complete documentation is available at www.cino.com.tw.

| 1 Power Indicator | 4 Scan Window |
| 2 Status Indicator | 5 Beeper |
| 3 Trigger | 6 Cable Release Hole |

Connecting to Your Host

FuzzyScan scanners support USB and RS-232 Serial interfaces. Please choose your desired interface cable, then plug it into the cable interface port of the scanner and connect it to the host. If you would like to remove the cable, please straighten one end of a paper clip, and then insert it into the cable release hole to pull out the cable.

RS232 Serial

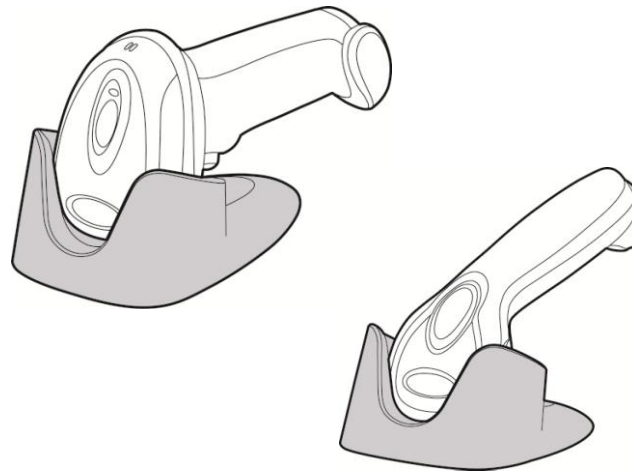

USB HID & USB COM

Using Accessories

You can enhance productivity of your workforce by using various accessories to fulfill a wide variety of application demand.

Universal Holder

The stylish Universal Holder is designed for storing your scanner when not in use. It serves to protect the scanner from lens-scratched or falling. Moreover, its artistic-design enhances the entire value of the scanner. But please note that the holder is not applicable for **A series** scanners.

Hand-free SmartStand

SmartStand is specifically designed for hand-free applications to maximize user's comfort and productivity. You can adjust the scanner holder to desired position for optimized scanning.

Thanks to the auto-sense design, the scanner is capable of switching between presentation scanning and hand-held scanning automatically while working with SmartStand. But please note that this feature is not available for **A500/F500** series scanners.

In presentation mode, the barcode may not be detected by the scanner in an environment with very dim ambient lighting. You can select higher sensitivity level through the setting of **Presentation Sensitivity** to increase scanner's sensitivity.

CONFIGURING YOUR SCANNER

Barcode Programming Manual

The FuzzyScan bar code commands are specially designed **Proprietary** bar code labels which allow you to set the FuzzyScan internal programming parameters. There are **System Command**, **Family Code** and **Option Code** for programming purpose.

Each programmable family and bar code command label is listed on the same page with major system commands. The detailed explanations and special programming flowchart are printed on facing or following pages. You can read the explanation and set the FuzzyScan concurrently.

A supplemental bar code command menu incorporates the bar code command labels of System Command and Option Code. As you set the FuzzyScan, open the bar code command menu to find the option code page. You may scan the desired family code and option code to set FuzzyScan. If you want to change the programming family for multiple settings, you need only turn over the programming page to find next desired programming family.

System Command

The System Command is the highest level bar code command which directs FuzzyScan to perform immediate operations, such as entering programming mode (**PROGRAM**), exiting programming mode (**EXIT**), listing system information (**SYSLIST**), recovering to factory preset configurations (M_DEFAULT) and so on. Please note that all system commands will take a few seconds to complete the operations. User must wait for the completion beeps before scanning another bar code.

Family Code

The Family Code is scanned to select the user desired programming family. FuzzyScan has already provided more than one hundred programming families to meet any specific requirements.

Option Code

The Option Codes is a set of bar code commands represented by “0–9”, “A–F” and finishing selection (**FIN**). For most setting, you must select at least one option code following the family code selection to set the desired parameter for the selected programming family.

Programming Procedures

As you scan the bar code command to select the desired parameters, information about the final selected parameters represented by the bar code commands are stored in the FuzzyScan's internal Flash Memory ASIC or memory. If you turn off the unit, the Flash Memory ASIC or non-volatile memory retains all programming options. You need not re-program the FuzzyScan if you want to keep the existing configurations in the next power on.

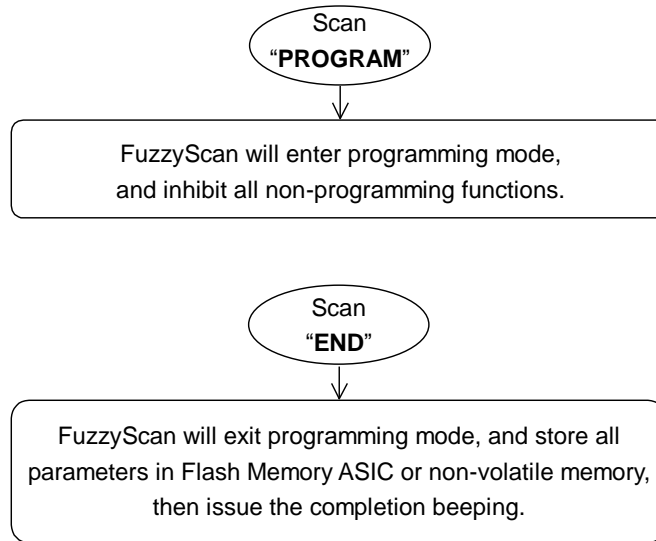

The programming procedures of FuzzyScan are designed as simple as possible for ease of setting. Most programming families take the **Single Scan Selection** programming procedure. But several programming families have more complex and flexible programmable options, and you must take **Multiple Scans Selection, Cycling Scan Selection or Dual Level Selection** to complete their programming procedures. Each kind of programming procedure is listed in the following pages for your reference. Please give careful attention to become familiar with each programming procedure.

If the programming family must take multiple scans selection, cycling scan selection, or dual level selection procedures, the family of the programming menu will be marked with the matched representing symbol of **Programming Category** (P.C.) in bold font listed in the following table. You can easily find the bold mark in the programming menu, and refer to their flowcharts for details. Before setting the FuzzyScan, please also refer to the "Beeping Indications" listed in Appendix to understand the details of programming beeping indications. It will be very helpful for you to know the existing status while you are programming the FuzzyScan.

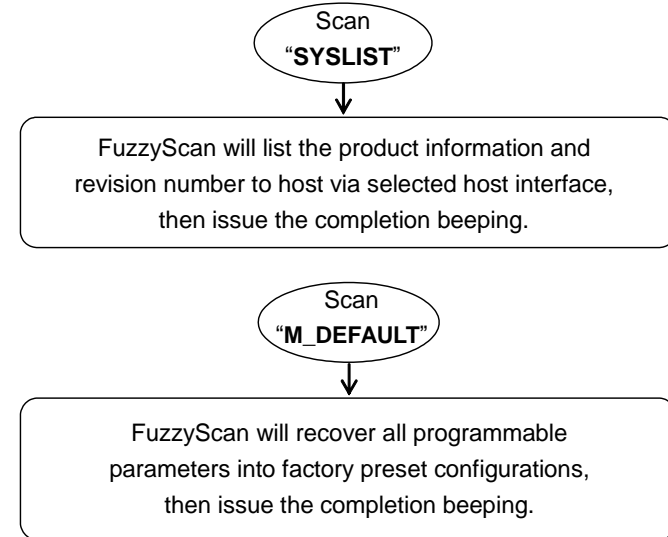

Conventions of Programming Menu

Conventions	Descriptions
◆	Factory Default Value
P.C.	Programming Category SS : Single Scan selection MS : Multiple Scans selection CS : Cycling Scan selection DS : Dual level Scan selection
()	Necessary Option Code
[]	Selectable Option Code

Program & End

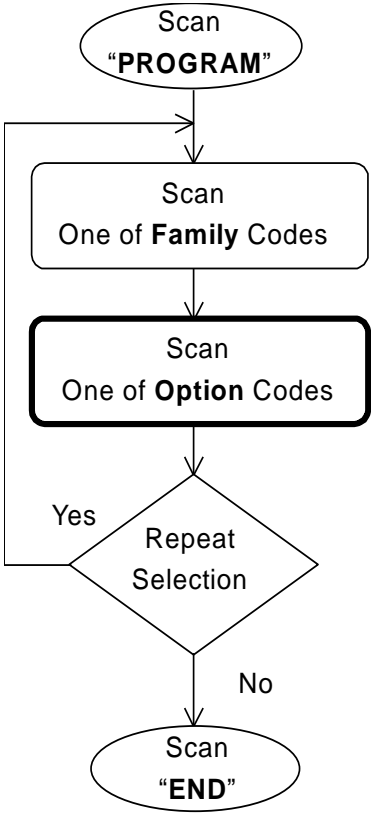

System List, Group & Master Default

Please note that the FuzzyScan will take 3-4 seconds to store parameters in internal Flash Memory ASIC or non-volatile memory after you scan the “END”. Please **don’t** turn off the power before the completion beeping. It may destroy all configured parameters.

Single scan selection

Enter programming mode.

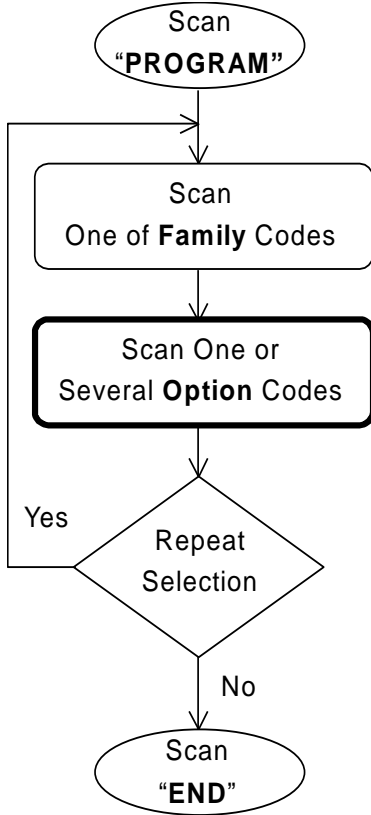

Select one of desired programming families.

Select one option code of desired parameter.

Want to select another programming family?

Exit programming mode.

Multiple scans selection

Enter programming mode.

Select one of desired programming families.

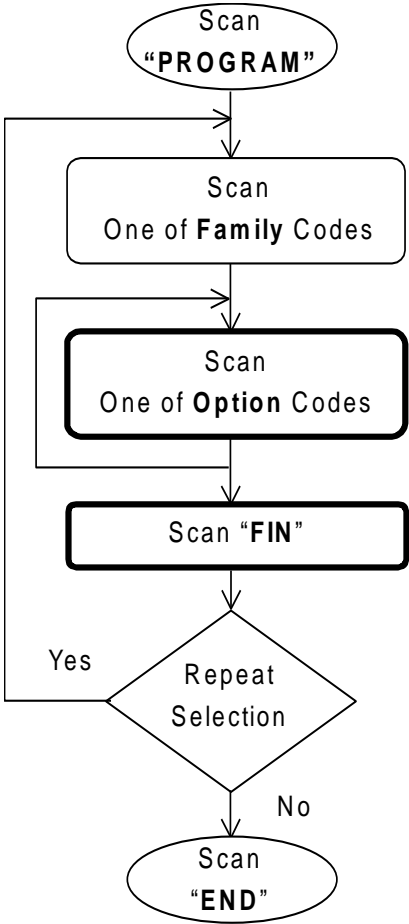

- 1. **Select one or several option codes to select desired parameters.**
- 2. **If it's necessary, scan "FIN" to terminate option code selection.**

Want to select another programming family?

Exit programming mode.

Cycling scan selection

Enter programming mode.

Select one of desired programming families.

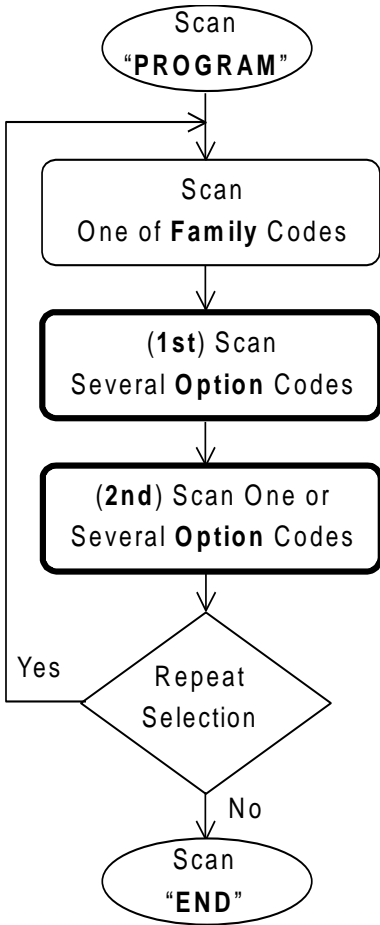

Cycling select one or several option codes of desired parameters as "Single" or "Multiple" scans selection.

Finish cycling selection. (If necessary)

Want to select another programming family?

Exit programming mode.

Dual level selection

Enter programming mode.

Select one of desired programming families.

Select several option codes of desired parameters.

- 1. Select one or several option codes of desired parameters.
- 2. If it's necessary, scan "FIN" to terminate option code selection.

Want to select another programming family?

Exit programming mode.

PROGRAM

- If your application is known, you may select those known symbologies only to increase the reading speed and decrease the possibility of reading error. Furthermore, to add the "Symbology ID" into the transmitted data is also helpful to identify the specific symbology.
- Above symbologies marketed with * are enabled as default. When you select "Auto", the scanner only reads those symbologies marked with *.
- "Popular 1D" includes "Code 128", "GSA-128", "UPC-A", "UPC-E", "EAN-13", "EAN-8", "Codabar/NW-7", "Code 39", "Interleaved 2 of 5", "Code 93", "GS1 DataBar (RSS-14)".
- When you set the minimum and maximum length of each symbology, please note the data length of scanned bar code doesn't include start/stop characters.

	SS	Level 3	3

▪ **Code 39 Security Level**

The scanner offers four levels of decode security for Code39 bar codes:

Level 0: If you are experiencing misread of poorly-printed or serious out-of-spec. bar codes in level 1, please select level 0.

Level 1: If you are experiencing misread of poorly-printed or out-of-spec. bar codes in level 2, please select level 1.

Level 2: This is the default setting which allows the scanner to operate fastest, while providing sufficient security in decoding "in-spec" Code39 bar codes.

Level 3: If you failed to read poorly-printed or out-of-spec. bar codes in level 2, please select level 3. This is the most aggressive setting and may increase the misread.

▪ **UPC/EAN Security Level**

The scanner offers three levels of decode security for UPC/EAN bar codes:

Level 0: If you are experiencing misread of poorly-printed or out-of-spec. bar codes, especially in characters 1, 2, 7, and 8 in level 1, please select level 0. Selection of this security level may significantly impair the decoding ability of the scanner.

Level 1: This is the default setting which allows the scanner to operate fastest, while providing sufficient security in decoding “in-spec” UPC/EAN bar codes.

Level 2: If you failed to read poorly-printed or out-of-spec. bar codes in level 1, please select level 2. This is the most aggressive setting and may increase the misread.

- The **Supplement Scan Voting** is the number of times the same UPC/EAN with 2/5 supplement digits has to be decoded before it is transmitted. It is helpful when decoding a mix of UPC/EAN symbols with and without supplement digits. This function is effective when you select UPC/EAN with only 2 supplement digits, UPC/EAN with only 5 supplement digits or UPC/EAN with 2/5 supplement digits. The default value is Level 3. When you select higher level, it may impact the reading speed on poorly-printed, low contrast or damage barcode labels.

Preamble 	SS MS	None ◆ 1-15 characters Maximum 15-character input; scan "FIN" to terminate this selection.	FIN [00-7F], [FIN]
Postamble 	SS MS	None ◆ 1-15 characters Maximum 15-character input; scan "FIN" to terminate this selection.	FIN [00-7F], [FIN]
FNC1 Symbol Char. Transmit 	SS SS	Disable Enable ◆	0 1

- **FNC1 Symbol Char. Transmit:** When this function is enabled and the FNC1 is contained in scanned data, the scanner transmits the FNC1 to the host. Chart of the FNC1 is provided in Appendix- Keyboard Function Code Table. When the scanner interface is set to keyboard, the scan code is converted to corresponding key function before it is transmitted.
- The function of "Caps Lock Control" and "Key Pad Emulation" are **only** available for IBM PC/AT, PS/VP, PS/2 series personal computers and compatible machines. While selecting the other host interfaces, these selections don't perform the above functions for you.

PROGRAM

Keyboard Interface Control Caps Lock & Caps Lock Release Control

F_DEFAULT

Family Code Selection	P.C	Parameter Selection	Option Code
Caps Lock Control 	SS SS SS	"Caps Lock Off" State ◆ "Caps Lock On" State Auto Detect (PC/AT, PS/2, Keyboard Replacement and DOS/V Machines only)	0 1 2
Caps Lock Release Control 	SS SS	"Caps Lock On, Caps Off" ◆ "Caps Lock On, Shift Off"	0 1

- The function of "Caps Lock Control" is **only** available for IBM PC/AT, PS/VP, PS/2 series personal computers and compatible machines. While selecting the other host interfaces, these selections don't perform the above functions for you.
- Please check the **actual** Caps Lock state in use while software application is running. If the Caps Lock state is off, select "**Caps Lock Off**" state, and then FuzzyScan will perform normal data transmission. If the Caps Lock state is on, select "**Caps Lock On**" state. Select "**Auto Detect**", FuzzyScan will perform special transmission handshaking without changing the status of Caps Lock switch.

PROGRAM

Keyboard Interface Control Delay Setting

F_DEFAULT

Family Code Selection	P.C	Parameter Selection	Option Code
Intermessage Delay 	SS MS	None ◆ 1-99 (x5) msec. Scan 2 digits from the option code chart in Appendix; then FuzzyScan will terminate this selection automatically.	FIN (2 digits)
Intercharacter Delay 	SS MS	None ◆ 1-99 (x5) msec. Scan 2 digits from the option code chart in Appendix; then FuzzyScan will terminate this selection automatically.	FIN (2 digits)
Interfunction Delay 	SS MS	None ◆ 1-99 (x5) msec. Scan 2 digits from the option code chart in Appendix; then FuzzyScan will terminate this selection automatically.	FIN (2 digits)

- **Intermessage Delay** is a time delay between messages output by FuzzyScan. Increasing this delay will help host applications process the incoming data on time.
- **Intercharacter Delay** is a time delay between data characters output by FuzzyScan. These two parameters are used to synchronize data communication when : 1) the data transmission speed is too fast, characters may be skipped; 2) multitasking operation system or host computers in a network may slow down the keyboard handling; 3) various notebook or desktop PC systems require different timing parameter settings. Please always add one extra unit as safety margin when adjusting these two parameters.
- **Interfunction Delay** is a time delay of transmission of segments in each message string.

- **Corresponding Languages:** Please see Appendix below, “Code Page - Table of Corresponding Languages”.
- **Barcode Encoding Format:** 2D barcodes can be encoded using different code pages. To properly decode the data of a 2D barcode, the scanner must first be set to the corresponding code page of such data. Select UTF8 if the 2D barcode was encoded in Unicode (UTF-8).
- **Keyboard Output:** Different languages use different code pages. For your scanner to properly display the content of a 2D barcode, select the codepage that corresponds to the content’s language. Please check your system locale setting in Windows and make sure that it also matches this language.
 - 1) Mac Device Output: If your host is a Mac device, select “MAC Unicode Output” as the scanner’s output setting (the data will be in Unicode). You must also first ensure that your Mac device has the required Unicode Hex Input Setup and is configured for the 16-bit input method. Please see Appendix below, “Code Page - Unicode Hex Input Setup”.
 - 2) WIN Notepad Unicode Output: If your host is a Windows device, you can output the data in Unicode format to Notepad. You must first ensure that your Windows device has the required Unicode Hex Input Setup, and is set to the US English input method. Please see Appendix below, “Code Page - Unicode Hex Input Setup”.
 - 3) WIN WordPad Unicode Output: If your host is a Windows device, you can output the data in Unicode format to WordPad. You must first ensure that your Windows device is set to the US English input method.

PROGRAM

Serial Interface Control FNC1 Symbol Char. Transmission

F_DEFAULT

Family Code Selection	P.C	Parameter Selection	Option Code
FNC1 Symbol Char. Transmit 	SS SS	Disable Enable ◆ When this function is enabled and the FNC1 is contained in scanned data, the scanner transmits the FNC1 to the host. Chart of the FNC1 is provided in Appendix-Keyboard Function Code Table. When the scanner interface is set to keyboard, the scan code is converted to corresponding key function before it is transmitted	0 1

PROGRAM

Serial Interface Control Delay Setting

F_DEFAULT

Family Code Selection	P.C	Parameter Selection	Option Code
Intermessage Delay 	SS MS	None ◆ 1-99 (x5) msec. Scan 2 digits from the option code chart in Appendix; then FuzzyScan will terminate this selection automatically.	FIN (2 digits)
Intercharacter Delay 	SS MS	None ◆ 1-99 (x5) msec. Scan 2 digits from the option code chart in Appendix; then FuzzyScan will terminate this selection automatically.	FIN (2 digits)
Interfunction Delay 	SS MS	None ◆ 1-99 (x5) msec. Scan 2 digits from the option code chart in Appendix; then FuzzyScan will terminate this selection automatically.	FIN (2 digits)

- **Intermessage Delay** is a time delay between messages output by FuzzyScan. Increasing this delay will help host applications process the incoming data on time.
- **Intercharacter Delay** is a time delay between data characters output by FuzzyScan. These two parameters are used to synchronize data communication when : 1) the data transmission speed is too fast, characters may be skipped; 2) multitasking operation system or host computers in a network may slow down the keyboard handling; 3) various notebook or desktop PC systems require different timing parameter settings. Please always add one extra unit as safety margin when adjusting these two parameters.
- **Interfunction Delay** is a time delay between transmission and reception of each segment of the message string.

PROGRAM

Serial Interface Control Protocol, ACK/NAK Setting

F_DEFAULT

Family Code Selection	P.C	Parameter Selection	Option Code
Handshaking Protocol 	SS SS SS SS	None (free running mode) ◆ RTS/CTS (hardware handshaking) ACK/NAK (software handshaking) Xon/Xoff (software handshaking)	0 1 2 3
NAK Retry Count 	SS SS	3 times ◆ 0~255 times	FIN (3 digits)
ACK Indication 	SS SS SS SS	Disable ACK Time-out Indication Enable ACK Time-out Indication ◆ Disable ACK Indication ◆ Enable ACK Indication	0 1 2 3

- USB COM doesn't support RTS/CTS handshaking protocol.
- When the **ACK/NAK Software Handshaking** option is selected, the FuzzyScan waits for an **ACK** (acknowledge) or **NAK** (not acknowledge) from the host computer after each data transmission. If the NAK is received, FuzzyScan will re-send the data until receiving ACK.'
- **NAK Retry Count**
 After transmitting data, the scanner expects a NAK response from the host up to the preset "Serial Response Time-out". If the scanner doesn't get a response, the scanner will issue an error indication and discard the data. When a NAK is received, the scanner transmits the same data again and waits for either an ACK or NAK. The scanner issues an error indication and discards the data under following two conditions:
 1) After preset NAK retry counts is received within the preset serial response time-out.
 2) If the preset time-out is up but the preset NAK retry counts haven't come to the end.
 The default retry counts are three times. If you program "0 time", the scanner won't resend the data to the host when the scanner receives a NAK. The scanner will discard the data. If you program "255 times", the scanner can receive unlimited NAKs from the host within the pre-set serial response time-out.
 This function is not available for batch mode. When you enable this function in on-line mode, the out-of-range function will be disable automatically.
- **ACK Indication:**
 Disable: There's neither LED nor beeping indication for this setting.
 Enable: There's a specific LED and beeping indication for this setting.

PROGRAM

Serial Interface Control Response Time-out Setting, Baud Rate, Data Frame

F_DEFAULT

Family Code Selection	P.C	Parameter Selection	Option Code
Serial Response Time-out 	SS None SS 200 mseconds SS 500 mseconds ◆ SS 800 mseconds SS 1 second SS 2 seconds	3 seconds 4 seconds 5 seconds 8 seconds 10 seconds 15 seconds	0 6 1 7 2 8 3 9 4 A 5 B
Baud Rate (BPS) 	SS 38.4K BPS SS 19.2K BPS SS 9600 BPS ◆ SS 4800 BPS	2400 BPS 1200 BPS 57.6K BPS 115.2K BPS	0 4 1 5 2 8 3 9
Data Frame 	SS 8, None, 1 ◆ SS 8, Odd, 1 SS 8, Even, 1 SS 8, Space, 1 SS 8, Mark, 1 SS 8, None, 2 SS 7, Odd, 1 SS 7, Even, 1	7, Space, 1 7, Mark, 1 7, None, 2 7, Odd, 2 7, Even, 2 7, Space, 2 7, Mark, 2	0 8 1 9 2 A 3 B 4 C 5 D 6 E 7

- When the **RTS/CTS Hardware Handshaking** option is selected, the **RTS** (request to send) and **CTS** (clear to send) signals will be issued before normal data communication. This option is very helpful to ensure the reliability of data communication.
- The **Serial Response Time-out** is a pre-defined delay time for FuzzyScan to wait for handshaking, acknowledgment or non-acknowledgment from the host computer

	SS	Enable standard Code 39 skip emulation	1
	SS	Enable standard Code 39 replace emulation	2
	SS	Enable Full ASCII Code 39 emulation	3
	SS	Enable Code 128 emulation	4

- **Code 39 Skip** : When this option is selected, all scanned data will be translated as Standard Code 39 wand/laser emulation output. If any lower case characters are read, they will be translated to upper case characters. Any other characters that are not available in Code 39 symbology set will be **skipped**.
- **Code 39 Replace**: Any character not normally available in the standard Code 39 symbology set, will be translated as **Space**.

PROGRAM

Operation Control (F & L Series)

Operation Mode

F_DEFAULT

Family Code Selection	P.C	Parameter Selection	Option Code
Operation Mode 	SS	Low Power mode	0
	SS	Trigger mode ◆	1
	SS	Presentation mode	2
	SS	Alternative mode	3
	SS	Flash mode	4
	SS	Force mode	5
	SS	Toggle mode	6
	SS	Diagnostic mode	7
	SS	Level mode	8
	SS	Multiple Read mode	C

- **Low Power Mode (Low Power Triggering):** The scanner goes into idle state after scanning the barcode. You must press the trigger to wake up the scanner for operation.
- **Trigger Mode (External Triggering):** The scanner goes into standby state after scanning the barcode. You must press the trigger to turn on the light source of the scanner before scanning the barcode.
- **Presentation Mode (Auto Detection):** Presentation mode uses ambient light to detect the barcodes. The light source is off until the scanner detects an image which is similar to a barcode. Then the light source turns on automatically to read the barcode. If the light level in the room is not high enough, Presentation Mode may not work properly. You can choose different level of "Presentation Sensitivity" to meet your application (Please refer to the setting of "Presentation Sensitivity").
- **Alternative Mode (Periodic Power Off):** The scanner keeps its light source on till the pre-defined **Light Source On Time** is up. After the scanner turns off its light source, you must press the trigger to turn on the light source again. After each good read, the timer of "Light Source On Time" is reset. It's very convenient because for multiple scans you only need to press the trigger once.
- **Flash Mode (Pulse Driven Reading):** The scanner automatically flashes its light source at low frequency without triggering. If the scanner detects an image which is similar to a barcode, it forces on its light source automatically and scans the barcode. Use **Flash Duty Cycle** to adjust the frequency of the blinking.
- **Force Mode (Continued Power On):** The scanner always turns on its light source for continuous operation without triggering. This mode is convenient for high speed barcode reading.
- **Toggle Mode (Repeat Reading):** Under toggle mode the light source of the scanner keeps on when the trigger is pulled once. With its light source on the scanner read a barcode immediately when it "sees" the barcode. The scanner keeps its light source on until the trigger is pulled again.
- **Diagnostic Mode (Test Reading):** This operation mode is specifically designed for diagnostic purposes. When this operation mode is selected, its light source is forced on regardless of other programmable parameters, such as Reread Delay, Redundancy, and so forth.
- **Level Mode (Auto Power Off):** When this operation mode is selected, the scanner continues to turn its light source on before it has a good read or a pre-defined "Light Source On Time" is due. If the scanner decodes a barcode successfully, it turns off its light source immediately. After the scanner turns off its light source, you must press the trigger again to turn on its light source. If the scanner detects no barcodes or fails to have a good read during the pre-defined Light Source On Time, the scanner enters the idle state when time is up.

- **Multiple Read Mode:** The scanner is allowed to decode multiple barcodes with a single pull of the trigger. When you press and hold the trigger to aim at a series of barcodes, the scanner will decode each barcode and beep for each good read. You can enable **Unique Barcode Reporting** function to avoid reading the same code multiple times in a same scanning session.
 - FuzzyScan Laser model only have LED illumination (without laser aiming line) in **Flash/ Force/Toggle/ Diagnostics Modes**.

PROGRAM

Operation Control
(F & L Series)

F_DEFAULT

Presentation Control, Scan Rate, Flash Duty, SmartStand Power off Timeout

Family Code Selection	P.C	Parameter Selection	Option Code
Presentation Control 	SS SS SS	Presentation mode ◆ Flash mode Force mode	0 1 2
Scan Rate Control 	SS SS	Dynamic ◆ Fixed	0 1
Flash Duty Cycle 	SS SS SS SS	1/2 duty cycle ◆ 2/3 duty cycle 3/4 duty cycle 4/5 duty cycle L680/L780 laser imagers don't support this function.	0 1 2 3
SmartStand Power Off Timeout 	SS SS SS	3 mins ◆ 5 mins 10 mins Only available for FuzzyScan Laser model	0 1 2

- **Presentation Control:** When the scanner is placed on SmartStand, the scanner will be switched from hand-held scanning to hands free scanning automatically. Three hands scanning modes are available. You are recommended to use flash mode or force mode while under insufficient ambient light.
- **Scan Rate Control:** The scanner will have better motion tolerance when you select “Fixed” scan rate. It’s suitable for application which needs higher motion tolerance on the move. But this may impact to the reading distance.
 - The **Flash Duty Cycle** is designed to control the flashing frequency of the light source.
- The **SmartStand Power Off Timeout** is a pre-defined duration for scanner’s light source on time when the scanner is placed on SmartStand. While the scanner is placed on SmartStand, the scanning-type will be switched from hand-held scanning to presentation scanning and the light source will be forced on automatically. The light source will be off when the pre-defined duration is up.

LED Illumination Control, Illumination Delay

Family Code Selection	P.C	Parameter Selection	Option Code
LED Illumination Control 	SS SS	Always on Intelligent Mode ◆	0 1
LED Illumination Delay 	SS SS SS SS SS	100 ms 150 ms ◆ 200 ms 250 ms 300 ms	0 1 2 3 4

- LED Illumination Control:** When you enable “always on”, the LED illumination will be always on when you press the trigger. When you enable “intelligent mode”, the scanner will emit the laser aiming line first, the LED illumination will be turned on after the preset LED illumination delay. Intelligent mode is recommended to be used in regular ambient light environment.

**Operation Mode,
Presentation & Illumination Control**

Family Code Selection	P.C	Parameter Selection	Option Code
Operation Mode 	SS	Low Power mode (Low power triggering)	0
	SS	Trigger mode (External triggering) ◆	1
	SS	Presentation mode (Auto detection)	2
	SS	Alternative mode (Periodic power off)	3
	SS	Force mode (Continued power on)	4
	SS	Toggle mode (Repeat reading)	5
	SS	Diagnostic mode (Test reading)	6
	SS	Level mode (Auto power off)	7
	SS	Multiple Read Mode	8
Presentation Control 	SS	Presentation mode ◆	0
	SS	Force mode	1
Illumination Control 	SS	Disable	0
	SS	Enable ◆	1
Presentation Background Lighting 	SS	LEDs Off	0
	SS	LEDs On ◆	1

- **Low Power Mode (Low Power Triggering):** The scanner goes into idle state after scanning the barcode. You must press the trigger to wake up the scanner for operation.
- **Trigger Mode (External Triggering):** The scanner goes into standby state after scanning the barcode. You must press the trigger to turn on the light source of the scanner before scanning the barcode.

- **Presentation Mode (Auto Detection):** Presentation mode uses ambient light to detect the barcodes. The light source is off until the scanner detects an image which is similar to a barcode. Then the light source turns on automatically to read the barcode. If the light level in the room is not high enough, Presentation Mode may not work properly. You can choose different level of “Presentation Sensitivity” to meet your application (Please refer to the setting of “**Presentation Sensitivity**”).
- **Alternative Mode (Periodic Power Off):** The scanner keeps its light source on till the pre-defined **Light Source On Time** is up. After the scanner turns off its light source, you must press the trigger to turn on the light source again. After each good read, the timer of “Light Source On Time” is reset. It’s very convenient because for multiple scans you only need to press the trigger once.
- **Force Mode (Continued Power On):** The scanner always turns on its light source for continuous operation without triggering. This mode is convenient for high speed barcode reading.
- **Toggle Mode (Repeat Reading):** Under toggle mode the light source of the scanner keeps on when the trigger is pulled once. With its light source on the scanner read a barcode immediately when it “sees” the barcode. The scanner keeps its light source on until the trigger is pulled again.
- **Diagnostic Mode (Test Reading):** This operation mode is specifically designed for diagnostic purposes. When this operation mode is selected, its light source is forced on regardless of other programmable parameters, such as Reread Delay, Redundancy, and so forth.
- **Level Mode (Auto Power Off):** When this operation mode is selected, the scanner continues to turn its light source on before it has a good read or a pre-defined “Light Source On Time” is due. If the scanner decodes a barcode successfully, it turns off its light source immediately. After the scanner turns off its light source, you must press the trigger again to turn on its light source. If the scanner detects no barcodes or fails to have a good read during the pre-defined Light Source On Time, the scanner enters the idle state when time is up.
- **Multiple Read Mode:** The scanner is allowed to decode multiple barcodes with a single pull of the trigger. When you press and hold the trigger to aim at a series of barcodes, the scanner will decode each barcode and beep for each good read. For more precise barcode decoding, you are recommended to enable **Center Alignment** function while multiple read mode is selected. You can enable **Unique Barcode Reporting** function to avoid reading the same code multiple times in a same scanning session.
- Operation modes categorized as “Hand-Held Mode”: Low power mode, Trigger mode, Alternative mode, Toggle mode, Level mode, Multiple read mode
- Operation modes categorized as “Hand-Free Mode”: Presentation mode, Force mode,
- The **Illumination Control** is only available for hand-held modes.
- **Presentation Background Lighting Control:** You can enable or disable presentation background lighting of the scanner under presentation mode according to the ambient light condition. When the ambient light is dim or dark, enabling this is helpful for motion sensing ability of the scanner.

PROGRAM

**Aiming Control, Delay Aiming Time-out Control,
Decode Aiming Control**

Family Code Selection	P.C	Parameter Selection	Option Code
Aiming Control 	SS	Regular Aiming	0
	SS	Intelligent Aiming ◆	1
	SS	Delay Aiming Control	2
Delay Aiming Time-out Control 	SS	200 ms	0
	SS	400 ms ◆	1
	SS	800 ms	2
	SS	1 sec	3
	SS	1.5 sec.	4
	SS	2 sec.	5
	SS	3 sec.	6
	SS	4 sec.	7
Decode Aiming Control 	SS	Disable in Hand-Held mode	0
	SS	Enable in Hand-Held mode ◆	1
	SS	Disable in Hand-Free mode	2
	SS	Enable in Hand-Free mode ◆	3

- The **Aiming Control** is only available for trigger mode. In Intelligent Aiming, the aiming light is turned on when the scanner is lifted. A trigger pull activates decoding process. After 2 seconds of inactivity, the aiming light will be shut off. Delay Aiming Control allows a delay time for the operator to aim the scanner before the image is taken. During the delay time, the aiming light will be on, but the LED illumination won't be turned on until the delay time is up.

 - The **Delay Aiming Time-out Control** is only available for trigger mode. You can use Delay Aiming Time-out Control to set the delay time.

Center Alignment, Unique Barcode Reporting

Family Code Selection	P.C	Parameter Selection	Option Code
Center Alignment 	SS	Disable in Hand-Held Mode ◆	0
	SS	Enable in Hand-Held Mode	1
	SS	Disable in Hand-Free Mode ◆	2
	SS	Enable in Hand-free Mode	3
Unique Barcode Reporting 	SS	Disable ◆	0
	SS	Enable	1

- **Center Alignment:** When this function is enabled, the scanner only decodes barcode(s) around aiming line.
- **Unique Barcode Reporting:** When this function is enabled, the scanner will only output data from each barcode once during a scanning cycle (the time duration when the trigger key is pressed and held without release). This prevents the output of repeat data in case a barcode is accidentally read multiple times during the same scanning cycle. For **Multiple Read mode** only.

Batch Reading

F_DEFAULT

Family Code Selection	P.C	Parameter Selection	Option Code
<p>Batch Reading</p>	SS	None◆ Batch Reading rule input (01-16 rules)	[FIN] [Rules] [FIN]

▪ **Batch Reading:** When this function is enabled, you can scan multiple barcodes one by one continuously upon one trigger event. The scanner reports a good read beep and indication only if all bar codes set by the “Batch Reading Rule” are read. Otherwise, the scanner reports an error beep and indication. The scanned data will be transmitted according to the preset sequence which is defined in “Batch Reading Rule” regardless the scanned order of those barcodes.

- Batch Reading function is only available **Trigger Mode**.
- Batch Reading is not available when **Multiple Read Mode** or **Center Alignment** is turned on.
-

▪ **Batch Reading Rule:**

- To set the Batch Reading rule
 - 1.Scan the **PROGRAM** symbol.
 - 2.Scan the **Batch Reading** symbol (Family Code).
 - 3.Use the **Option Code** to define the preset Batch Reading rule.
 - 4.Scan the **FIN** symbol.
 - 5.Scan the **END** symbol to save your Batch Reading rule.

Note: Scan the **ABORT** and **END** symbol to exit without saving any Batch Reading rule setting.
- When you scan “None”, the preset Batch Reading Rule will be cancelled.
- Batch Reading Rule Syntax:
[n] [Element 1] FF [Element 2] FF [Element 3] FF ...[Element n] FF
 Where **n** is the number of elements in the overall rule. The number of elements is up to 16.FF indicates the end of one element.

- Element structure:

[Cino ID Hex value] [Code length] [Character match(es)]

Where:

- **[Cino ID Hex value]**

Length: 2 byte

Please find Cino ID hex value from **Symbology ID Table** in appendix. Locate the Hex value for the symbology and scan the 2 digit hex values from the **Option Code**.

Note: 99 is the universal number, indicating all symbologies.

- **[Code length]**
Length: 4 byte
Specify what length of data output will be acceptable for this symbology. When you calculate the length, you must consider the whole data string which includes the programmed Preamble, Postamble, Scanned Data Length, Prefix/Suffix Symbol ID or AIM ID. Scan the four digit data length from the **Option Code**.
Note: 40 characters is entered as 0040; 9999 is a universal number, indicating all lengths.
- **[Character match]**
Length: 2-8 byte
You can refer to **HEX/ASCII Reference Table** to find the Hex value that represents the character(s) you want to match. Use the **Option Code** to scan the alphanumeric combination that represents the ASCII characters. You can match up to 4 characters which are counted from the start character of the whole **Data String**.
Note: When setting the matched character(s), you must match the content of the whole Data String, including the programmed Preamble, Postamble, Scanned Data Length, Prefix/Suffix Symbol ID OR AIM ID if you had defined. **FF** is the universal character, indicating all characters.
- **Batch Reading rule example**
In this example, you are scanning Code 39, Code 128, and Code 93 bar codes, but you would like to output the data in following sequence:
Code 128 - Code 39 - Code 93

B-CODE39

A-CODE128

C-CODE93

You would set up the Batch Reading rule with the following command line:

```
[PROGRAM] [Batch Reading] [0301999941FF07999942FF09999943FF] [FIN] [END]
```

The breakdown of the command line is shown below:

03	The number of elements in the overall rule
01	Code identifier of Code 128
9999	Code length that must match for Code 128, 9999 = all lengths
41	Start character match for Code 128, 41h = "A"
FF	End of first code
07	Code identifier of Code 39
9999	Code length that must match for Code 39, 9999 = all lengths
42	Start character that must match for Code 39, 42h = "B"
FF	End of second code
09	Code identifier of Code 93
9999	Code length that must match for Code 93, 9999 = all lengths
43	Start character match for Code 93, 43h = "C"
FF	End of third code

To program the previous example using specific lengths, you would have to count the programmed Preamble, Postamble, Scanned Data Length, Prefix/Suffix Symbol ID OR AIM ID if you had defined as part of the length. If you enable the Suffix Symbol ID of symbology, you would add one character to the previous example's length.

You would set up the Batch Reading rule with the following command line:

```
[PROGRAM] [Batch Reading] [0301001041FF070009FF09000943FF] [FIN] [END]
```

The breakdown of the command line is shown below:

- 03 The number of elements in the overall rule
- 01 Code identifier of Code 128
- 0010 Code length that must match for Code 128
 A-CODE128 sample length (9) plus Suffix Symbol ID (1) = 10
- 41 Start character match for Code 128, 41h = "A"
- FF End of first code
- 07 Code identifier of Code 39
- 0009 Code length that must match for Code 39
 B-CODE39 sample length (8) plus Suffix Symbol ID (1) = 9
- FF Universal matched character, indicating all character
 Also indicate end of second code
- 09 Code identifier of Code 93
- 0009 Code length that must match for Code 93
 C-CODE93 sample length (8) plus Suffix Symbol ID (1) = 9
- 43 Start character match for Code 93, 43h = "C"
- FF End of third code

Note: If the [Character match (es)] is set to "FF", the following "FF" which indicated the end of the code was not need to set.

- Structure of **Data String**

STX (RS232/USB COM interface)	Preamble	Scanned Data Length	Prefix Symbol ID Or Prefix AIM Symbol ID	Scanned Data modified by DataWizard	Suffix Symbol ID Or Suffix AIM Symbol ID	Postamble	ETX (RS232/USB COM interface)
1 character	1-15 characters	2-4 digits	1 or 3 characters	Variable length	1 or 3 characters	1-15 characters	1 character

	SS	Medium	1
	SS	Long◆	2
	SS	Extremely long	3
Hands Free Time-out 	SS	Short◆	0
	SS	Medium	1
	SS	Long	2
	SS	Extremely long	3
	SS	Disable	4

- The **Light Source On Time** is a pre-defined light source time out counter for Alternative Mode, Presentation Mode and Level Mode. The scanner keeps the light source on till the pre-defined light source on time is up. You can adjust this parameter to meet your own application requirement.
- The Presentation Mode, Force Mode and Flash Mode are referred to as “hands free” mode. The hands free mode will be automatically changed to manual trigger mode when you press the trigger. You can remain the scanner in manual trigger mode by setting the Hands Free Time-Out. Once the time-out duration is up (if there’s no any trigger operation), the imager will revert to the original hands free mode.

- **DataWizard** is the most powerful, Artificial-Intelligence based data editing expert system provided specially for the FuzzyScan family bar code readers. Through DataWizard, you can process the scanned data prior the transmissions in many ways as **Insert, Delete, Match, Verify, Replace, Reorganize, and Repeat Transmission**. It will help you to arrange the transmission of scanned data to any specific format without software modification.
- Due to the resources concern, **Full-feature DataWizard** is only supported by **PowerTool**. Through the PowerTool, all settings and configurations can be done on-screen on Windows-based operating system.
- A **Condensed Version DataWizard** is provided by each FuzzyScan scanner. Through this menu, the condensed DataWizard can be utilized easily via barcode menu readings.
- Please note that all "**Character**" input should be referred to the **ASCII/HEX Table** listed in Appendix to find matched HEX value.
- If you have any problem to use DataWizard, please refer to following pages for details, as well as consult your local FuzzyScan vendor or our web site for further assistance.

Include/Exclude Control 	SS DS	Transmitted data excluded the data of identified position ◆ Transmitted data included the data of identified position	0 1	

- The **Data Organizer** is used to edit the scanned raw data prior to transmitting the data to the host computers or terminals. It allows you to select desired bar code symbologies for organizer control, and provides maximum two identified positions to send the data **forward** or **backward**. It also allows you to control the transmitted data **including** or **excluding** the data of identification position. Please refer to the application example listed in page 75 for details.
- While the Data Organizer is enabled, it arranges only scanned data without **Preamble**, **Postamble**, **STX**, **ETX**, **Data Length**, **Prefix/Suffix Symbology ID** or **Record Suffix**.
- Regarding the “**Bar Code Selection**” and “**Position Calculation**” of Data Organizer, please refer to page 75 for details.
- Please note that all “**Character**” input should be referred to the **ASCII/HEX Table**.

Select a Bar Code Symbology

You can select one or all types of bar code symbologies to use Condensed DataWizard for advanced transmission arrangement. If you scan “00” to select all types, the FuzzyScan will arrange all incoming data to meet your pre-defined format. If you want to select only one type bar code, please select one of the option code listed below.

1D Bar Code Symbology			
Code 128	01	Matrix 2 of 5	38
GS1-128	31	Interleaved 2 of 5	48
UPC-A	02	China Postal Code	58
UPC-A with 2 supplement	32	German Postal Code	68
UPC-A with 5 supplement	42	Standard/Industrial 2 of 5	08

Position Calculation [Data Formatter]

If there is a 5-character input data string, refer to the following to calculate the actual position for insertion:

	X		X		X		X		X	
00		01		02		03		04		05

[Data Verifier, Data Replacer, Data Organizer]

If there is a 11-character data string, please refer to the following to calculate the actual position for identification.

X	X	X	X	X	X	X	X	X	X	X
00	01	02	03	04	05	06	07	08	09	10

Application Example

If your bar code label is a 16-digit Interleaved 2 of 5 which includes the information of 6-digit date code, 6-digit serial number and 4-digit unit price, you want the FuzzyScan do the following for you without software modification:

- Apply only Interleaved 2 of 5 to the condensed DataWizard.
- Check bar code is actually with 16-digit length.
- Allow bar code output whose date code is leading with “9”.
- Three outputs with “TAB” suffix.
- The date code output should skip “9” and replaced it by “A”.
- The serial number output should be led with “SN”.
- The unit price output should be skipped the first 2 digits.
- Test Bar Code : 9 8 1 0 2 5 1 2 3 4 5 6 9 8 7 6
- Actual Output : **A81025[TAB]SN123456[TAB]76[TAB]**

Programming Procedure

[Data Verifier]

- Scan “Program” to enter the programming mode.
- Scan “Verifier Control” and set bar code symbology to “48” (Interleaved 2 of 5).
- Scan “Identified Data Length” and set the length to “16”.
- Scan “1st Identified Character” and set the identified position to “00”, then set the identified character to “39” (Hex Code of 9).

[Data Formatter]

- Scan “Formatter Control” and set bar code symbology to “48”.
- Scan “1st Insertion” and set the identified position to “06”, then inserted characters to “09” (Hex Code of TAB), “53” (Hex Code of S), “4E” (Hex Code of N).
- Scan “2nd Insertion” and set the identified position to “12”, then inserted character to “09”. In the final, you must scan “FIN” (Finish) code to terminate this selection.
- Scan “3rd Insertion” and set the identified position to “16”, then inserted character to “09”. In the final, you must scan “FIN” (Finish) code to terminate this selection.

[Data Replacer]

- Scan “Replacer Control” and set bar code symbology to “48”.
- Scan “1st Replacement” and set the identified position to “00”, then replaced character to “41” (Hex Code of A).

[Data Organizer]

- Scan “Organizer Control” and set bar code symbology to “48”.
- Scan “1st Organization” and set the identified position to “16”, then set the data transmission to “0” (forward).
- Scan “2nd Organization” and set the identified position to “17”, then set the data transmission to “1” (backward).
- Scan “END” (Exit) to terminate the programming.

[Important Notice]

Please note that Condensed DataWizard will follow the preset working flow as below:

Verifier ▶ Formatter ▶ Replacer ▶ Organizer

So when you set the identified position in Data Organizer, you must consider the inserted data which you already set via Data Formatter.

APPENDIX

Symbology ID Table

Each AIM Code Identifier contains the three-character string **Jcm** where:

J = Flag Character; **c** = Code Character; **m** = Modifier Character

1D Symbology ID Table												
Code Family	Primary Format	Cino ID		AIM ID		Code Family	Primary Format	Cino ID		AIM ID		
		Hex Value	Char.	Code Char.	Modified Char.			Hex Value	Char.	Code Char.	Modified Char.

30	RS	1EH	LEFT (Edit)	Ctrl + 6	LEFT (Edit)
31	US	1FH	RIGHT (Edit)	*see below note	RIGHT (Edit)

▪ The **Key Function Table 3** is only supported by *A series* and *PA series*.

 To emulate the keyboard function key input for user definable parameters, user must configure actual content using the **Reserved ASCII00– 31** characters, and also **Enable** the “Function Key Emulation”. Otherwise, the Ctrl output will be done by the scanner. Please refer to the above Keyboard Function Code Table which is for IBMPC/XT/AT, PS/2, PS/VP, COMPAQ PC, HP Vectra PC, Notebook PC, APPLE and PowerMac, and WYSE PC Enhanced or fully compatible machines.

 The last character in the Ctrl Output column is varied for different countries.

Code Page - Unicode Hex Input Setup

1. Windows-Setting up the Windows Registry

Step 1: Open the Registry Editor. You can do so by typing “regedit” in the “Search Windows” function or in Command Prompt.

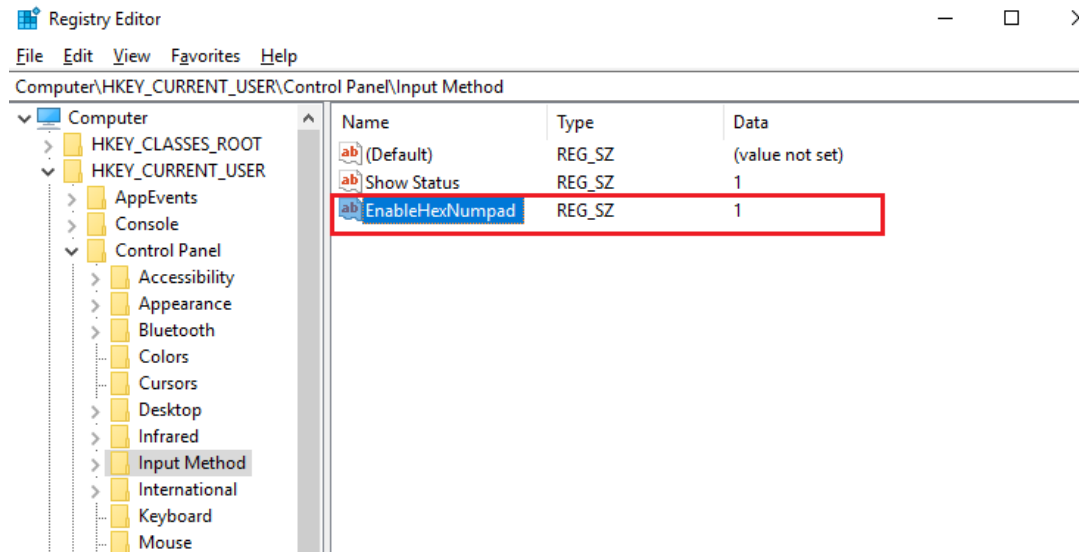

Step 2: Go to HKEY_CURRENT_USER\Control Panel\Input Method

Step 3: Right-click on mouse or press shift + F10 (on keyboard) to add a new String Value (of type “REG_SZ”).

Step 4: Name the new String value as “EnableHexNumpad” and set its Value data to “1”.

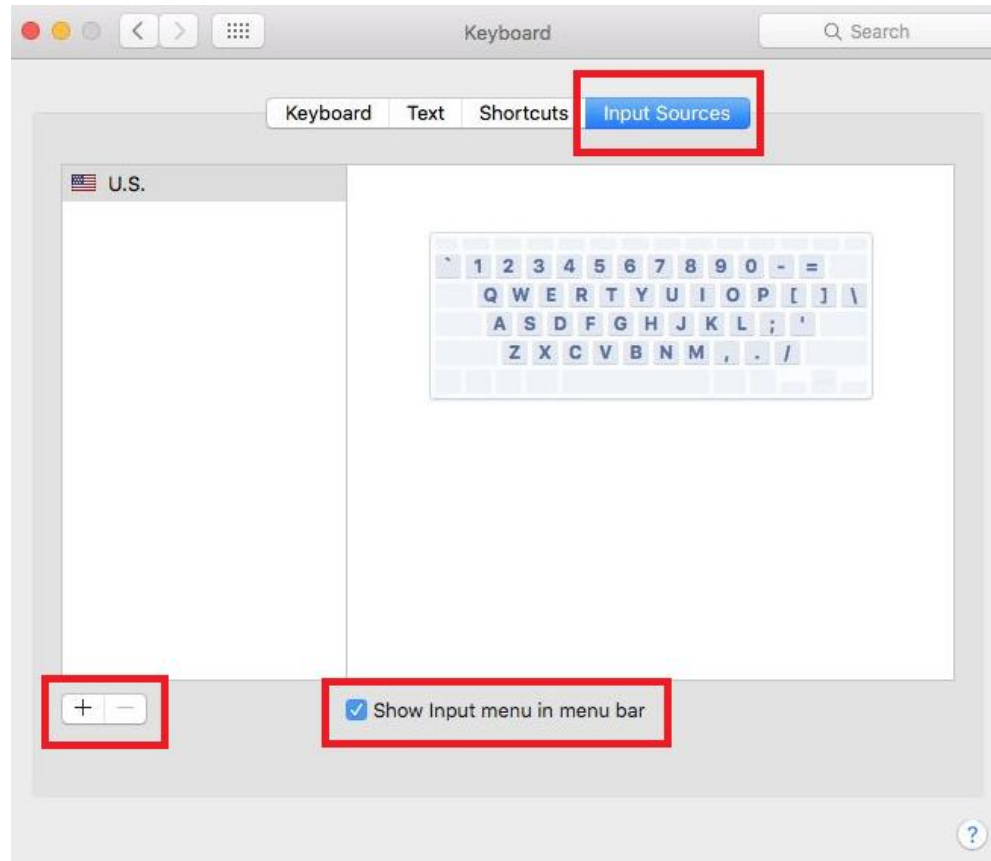

Step 5: Reboot the computer.

2. MAC - Adding Unicode Hex Input in menu bar

Step 1: Go to the Apple Menu -> System Preferences -> Keyboard

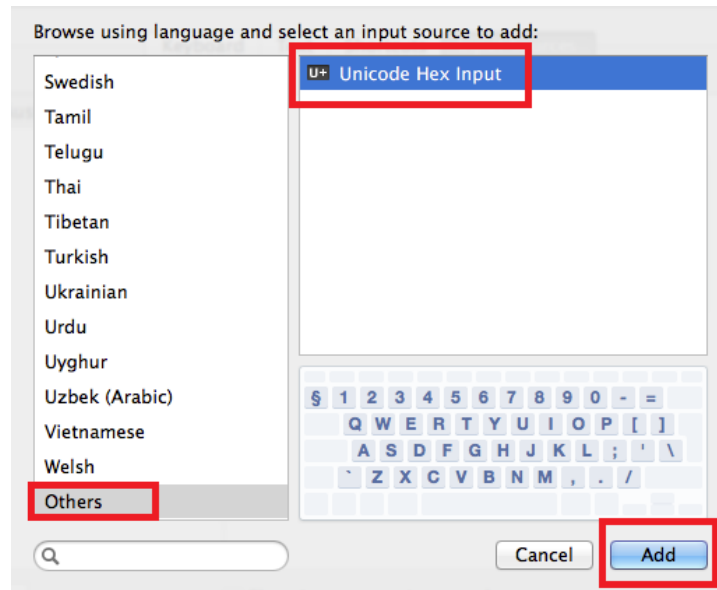

Step 2: On the Keyboard tab, click on “Input Sources” and check the “Show Input menu in menu bar” box.

Step 3: Click the “+” button to add an input source.

Step 4: Scroll to and select “Others”. Click on “Unicode Hex Input” (you can also use the Search function to find it). When done, click on the “Add” button.

Step 5: Close the Keyboard Preferences menu.

Step 6: Change the input selection to Unicode Hex Input in menu bar.

ASCII Input Shortcut

To configure the user definable parameters of FuzzyScan via programming menu, FuzzyScan will ask you to scan your desired ASCII value in **HEX** form. You have to refer to the “**HEX/ASCII Table**” for details.

Example:

If you want the scanned data output leading with a Dollar Sign, you have to set the “Preamble” to “\$”. The configuration procedure is listed below for reference.

- Scan the system command – **PROGRAM** listed on page 3-24 to enter programming mode.
- Scan family code – **PREAMBLE** to select this family.
- Refer to the **Hex/ASCII Table**, you will find the HEX value of “\$” is **24**.
- Scan the option code – **2** listed on the fold out back cover.
- Scan the option code – **4** listed on the fold out back cover.
- Scan the system command – **FIN (Finish)** to terminate Preamble setting.
- Scan the system command – **End** to exit the programming mode for normal operation.

HEX/ASCII Reference Table

H L	0	1	2	3	4	5	6	7
0	NUL	DLE	SPACE	0	@	P	`	p
1	SOH	DC1	!	1	A	Q	a	q
